

Blood Pressure Control for Patients With Diabetes (BPD)

New for 2025

- No applicable changes for this measure

Yes!
Supplemental data accepted

Definition

Percentage of members ages 18–75 with diabetes (Types 1 and 2) who have a blood pressure (BP) reading of <140/90 mmHg in the measurement year.

Plans(s) affected	Quality program(s) affected	Collection and reporting method
<ul style="list-style-type: none"> • Commercial • Medicaid • Medicare 	<ul style="list-style-type: none"> • CMS Star Ratings • NCQA Accreditation • NCQA Health Plan Ratings 	<p>Hybrid</p> <ul style="list-style-type: none"> • Claim/encounter data • Medical record documentation

Codes

The following codes can be used to submit outcome results for this measure; they are not intended to be a directive of your billing practice.

Systolic blood pressure levels 130-139 mm Hg

CPT®/CPT II | 3075F

Systolic blood pressure level <130 mmHg

CPT®/CPT II | 3074F

Systolic blood pressure level >=140 mmHg

CPT®/CPT II | 3077F

Tips and best practices to help close this care opportunity

- **Please check your Patient Care Opportunity Report (PCOR) or Practice Assist often to see members with open care opportunities.** If you have questions, your UnitedHealthcare representative can help.
- It is important to document patient reported vitals in the official medical record when conducting telehealth, telephone or online assessment visits. Please encourage patients to use a digital device to track and report their BP during every visit.
- **Always list the date of service and BP reading together**
 - If BP is listed on the vital flow sheet, it must have a date of service
- Members who have an elevated BP during an office visit in August, September or October should be brought back in for a follow-up visit before Dec. 31.
- Talk with members about what a lower goal is for a healthy BP reading
 - For example: 130/80 mmHg
- Remind members who are NPO for a fasting lab they should continue to take their anti-hypertensive medications with a sip of water on the morning of their appointment
- If your office uses manual blood pressure cuffs, don't round up the BP reading
 - For example: 138/89 mmHg rounded to 140/90 mmHg
- If a member's initial BP reading is elevated at the start of a visit, you can take multiple readings during the same visit and use the lowest diastolic and lowest systolic to document the overall reading. Retake the member's BP after they've had time to rest.
 - For example: **If a member's first BP reading was 160/80 mmHg and the second reading was 120/90 mmHg, use the 120 systolic of the second reading and the 80 diastolic of the first reading to show a BP result of 120/80 mmHg**
- If your office submits CCDs to UnitedHealthcare via our clinical data exchange program, please ensure the CCD function within your EMR system is set up to send CPT II Codes in the extract
- The use of CPT® Category II codes helps UnitedHealthcare identify clinical outcomes such as diastolic and systolic readings. It can also reduce the need for some chart review.
 - Adding CPT II modifier codes to a claim may result in the gap not closing
- BP readings can be accepted as supplemental data, reducing the need for some chart review. Please contact your UnitedHealthcare representative to discuss clinical data exchange opportunities.

Tips and best practices to help close this care opportunity

- Sharing member demographic data is critical to understanding the cultural, linguistic and social needs of those we serve and decreasing health inequities across the care continuum. This data can include, but is not limited to, race, ethnicity, language, sexual orientation, gender identity, pronouns, sex assigned at birth and disability status.
- As part of the UnitedHealthcare clinical structured data exchange program, we encourage you to include this demographic data with any structured data file or CCD. Your information is confidential. UnitedHealthcare will keep personally identifiable information confidential and won't disclose any information without your written consent.
